William B. Proctor, Executive Director

The Postsecondary Education Planning Commission, initially created by executive order in 1980, given statutory authority in 1981 (ss 240.145 and 240.147, Florida Statutes), and reauthorized by the 1991 Legislature, serves as a citizen board to coordinate the efforts of postsecondary institutions and provide independent policy analyses and recommendations to the State Board of Education and the Legislature. The Commission is composed of 11 members of the general public and one full-time student registered at a postsecondary education institution in Florida. Members are appointed by the Governor with the approval of three members of the State Board of Education and subject to confirmation by the Senate.

A major responsibility of the Commission is preparing and updating every five years a master plan for postsecondary education. The enabling legislation provides that the Plan "shall include consideration of the promotion of quality, fundamental educational goals, programmatic access, needs for remedial education, regional and state economic development, international education programs, demographic patterns, student demand for programs, needs of particular subgroups of the population, implementation of innovative educational techniques and technology, and the requirements of the labor market. The capacity of existing programs, in both public and independent institutions, to respond to identified needs shall be evaluated and a plan shall be developed to respond efficiently to unmet needs."

Other responsibilities include recommending to the State Board of Education program contracts with independent institutions; advising the State Board regarding the need for and location of new programs, branch campuses and centers of public postsecondary education institutions; periodically reviewing the accountability processes and reports of the public and independent postsecondary sectors; reviewing public postsecondary education budget requests for compliance with the State Master Plan; and periodically conducting special studies, analyses, and evaluations related to specific postsecondary education issues and programs.

Further information about the Commission, its publications, meetings and other activities may be obtained from the Commission office, Turlington Building, Department of Education, Tallahassee, Florida, 32399-0400; telephone (850) 488-7894; FAX (850) 922-5388; Website - www.firn.edu/pepc

POSTSECONDARY EDUCATION PLANNING COMMISSION

***AN OVERVIEW OF INDEPENDENT HIGHER EDUCATION IN
FLORIDA: ENROLLMENTS AND STATE FUNDING***

INTRODUCTION

The *Master Plan for Florida Postsecondary Education* (1982) stated that independent education is crucial to the maintenance of diversity and choice in postsecondary education in Florida. Strong independent institutions are vital to an effective system of education after high school and to a balanced set of options for students and faculty. In its 1998 plan, *Challenges and Choices: The Master Plan for Florida Postsecondary Education*, the Commission called for:

- increased state subsidy to in-state students attending Florida private institutions and
- continued investment of state support through programs such as the Florida Resident Access Grant (FRAG) to maximize the contribution of independent postsecondary education to Floridians.

Florida includes consideration of the resources of independent higher education in its *Master Plan* and appropriates public funds to promote its programmatic needs, to encourage student participation in the independent sector, and to support a dual-system of higher education. This report on enrollments in and state funding for independent institutions provides a review of certain aspects of the status of independent postsecondary education in Florida. The Commission believes that the review is useful to state policymakers responsible for distributing public funds among all available postsecondary education resources and setting policy for the regulation of the independent sector.

Independent education is crucial to the maintenance of diversity and choice in postsecondary education in Florida.

This report reviews state funding and enrollments for the past several years with state appropriations from 1991-92 adjusted to reflect funding holdbacks. Other Commission reports concerning the independent sector provide additional information concerning academic program contracting, the limited access competitive grant program, licensure of independent postsecondary education institutions, accountability for regionally accredited four-year independent colleges and universities in Florida, and state funding for historically black private colleges and universities. Included in this report are data concerning 27 regionally accredited four-year colleges and universities and all other institutions overseen by the State Board of Independent Colleges and Universities (referred to as private postsecondary institutions for financial aid purposes).

This report does not include information on a major segment of independent postsecondary education: the non-degree-granting proprietary sector. At the present time, no direct state funding is provided to institutions in the proprietary sector. Students at several of these institutions, however, may be eligible for some state student financial assistance. Information concerning this sector is maintained and annually reported by the State Board of Nonpublic Career Education (SBNCE). In 1997-98, 456 schools were licensed and reported enrollments of 72,344 students and completions of 38,396. Of the completers, 28,586 (74 percent) were placed in jobs, joined the military, or are continuing

their education at an institution of higher learning. Of the 456 licensed schools, 131 (29 percent) are accredited by one or more of the national or regional accrediting agencies.

ENROLLMENTS

As depicted in Table 1, between Fall 1997 and Fall 1998, total higher education headcount enrollment increased slightly (.5 percent). Enrollments for the state university system registered an increase of 1.4 percent, and independent colleges and universities increased 6.2 percent. Enrollments decreased in community colleges by 2 percent. The independent sector's share of total headcount enrollments increased to 19.6 percent.

In 1998, the independent institutions' share of enrollment in institutions awarding baccalaureate degrees was 37.4%.

Total enrollments for institutions awarding baccalaureate degrees, including those in the independent sector and the State University System, increased during the ten-year period from Fall 1989 to Fall 1998 from 265,583 to 345,449 students (30 percent) (Table 2). In 1998, the independent institutions' share of enrollment in institutions awarding baccalaureate degrees was 37.4 percent, representing an increase from 36.4 percent in 1997.

The 1995 Legislature, as part of its "Higher Education Access 2000 Act," enacted a limited access competitive grant program to be administered by the Department of Education. The grant program is designed "to provide enrollment opportunities for qualified applicants in selected limited access baccalaureate programs or equivalent academic tracks in eligible independent institutions." Both community college graduates and state university students who are Florida residents and interested in enrolling in a high priority employment field identified by the State Board of Education will be eligible.

The Commission, in conjunction with the Florida Education and Training Placement Information Program, the Department of Labor and Employment Security's Bureau of Labor Market Information, the Board of Regents, and the Department of Education, identified programs that met criteria for limited access status and high priority employment fields and recommended the two programs to be eligible for the grant program for the 1999-00 year:

Nursing Occupational Therapy

In the 1998-99 school year there were 234 recipients (\$388,618) of the grant. While participation in the grant program increased since 1996-97 (22 participants, \$40,895 dispersed), the number of recipients remains below the level that available funding would support. The low participation level may be attributed to a number of factors, including recruitment efforts and strategies and high demand programs in the independent sector being filled to capacity just as they are in the public programs.

Table 3 summarizes the appropriations made to independent colleges and universities by the Legislature for the past seven years. In 1993-94, appropriations to independent higher education amounted to \$52.3 million. Appropriations increased for the following five years, reaching almost \$96 million in 1998-99. Awards from appropriations for FY 1999-00 are estimated to approach \$115 million. The appropriation for the Florida Resident Access Grant (FRAG, formerly named the Tuition Voucher) increased (from \$40,852,200 to \$48,232,944 in 1999-00) and the Limited Access Grant remained constant at \$500,000.

STATE FUNDING

Tables 4-6 detail appropriations for academic program contracts, state-supported education projects at independent institutions, and the FRAG and financial assistance funds granted to students attending independent institutions.

For the most part, state funding for the independent sector of higher education remained constant in 1999-00. Funding in 1999-00 for existing academic program contracts was held at the 1993-94 level with the exception of the contracts at the University of Miami, which all received increases. The bachelor's degree programs in Elementary/Early Childhood Education (Florida Southern College) and Accounting and Elementary/Early Childhood Education (Florida Southern College) were reduced. Again, funding for the University of Miami's Medical Training Simulation Lab increased \$250,000. Consistent with the previous year, the appropriation to the University of Miami's First Accredited Medical School increased (\$15,645,200 to \$17,145,202).

Appropriations for need-based aid grew in 1999-00, with an increase in the FSAG from \$8,616,478 to \$14,622,823. This follows several years of consistent funding. Any reductions in state-funded, need-based aid are typically offset by institutional aid, driving tuition charges higher and widening the tuition gap between public and private higher education. The long-range result of such reductions impacts tuition rates, need-blind admission policies, diversity of the student body, number of working students, time to degree completion, enrollment levels and attrition in the independent sector, student demand for space in the public sector, and the financial viability of independent institutions.

SUMMARY

All state funding mechanisms for the independent sector experienced funding reductions at some point during the early 1990s. These funding reductions generally reflected reduced state revenues and economic constraints rather than a redefinition of the State's goal to achieve and preserve a strong dual-system of higher education in Florida. Funding practices during the initial years of economic recovery which have favored non-need-based or non-student programs rather than need-based programs, could diminish student access to programs in the independent sector in Florida. However, Department of Education budget recommendations for 2000-2001 include a significant commitment to increased need-based aid.

The State's growing commitment to and support of independent postsecondary institutions and students as documented in this report, has been accompanied by small but steady increases in this sector's share of higher education enrollment.

Continued monitoring of these data as well as related accountability reporting should confirm the extent to which state funding practices are reinforcing Florida's priorities concerning enrollments, completions, and the viability of both the independent and public higher education sectors.
